---

# GEONAS

- GEOdynamic Network of the Academy of Sciences
- to make regular geophysical and geodetic observations for geodynamic studies of the Bohemian Massif and the adjacent areas
- the permanent GNSS measurements started in 2001
- consist of 18 permanent GNSS observatories
- 3 stations are embodied in the network EUREF
- is part of the CzechGeo project
- cooperation with academic and private sector
  - data used by The Czech Technical University in Prague (CTU) and Geodezie Brno s.r.o.
- [www.geonas.irms.cas.cz](http://www.geonas.irms.cas.cz)

# The observatory of GEONAS network

- GNSS antenna on the roof
- GNSS receiver
- minicomputer
- GPRS modem
- accumulator for independent power supply of observatory

# Equipment changes

- two new receivers TOPCON NET-G5
- Třebíč (TREB) and Vidnava (VIDN) observatories
- now testing on the PRAH station located in the IRSM CAS CZ

# The permanent observatory of the GEONAS network

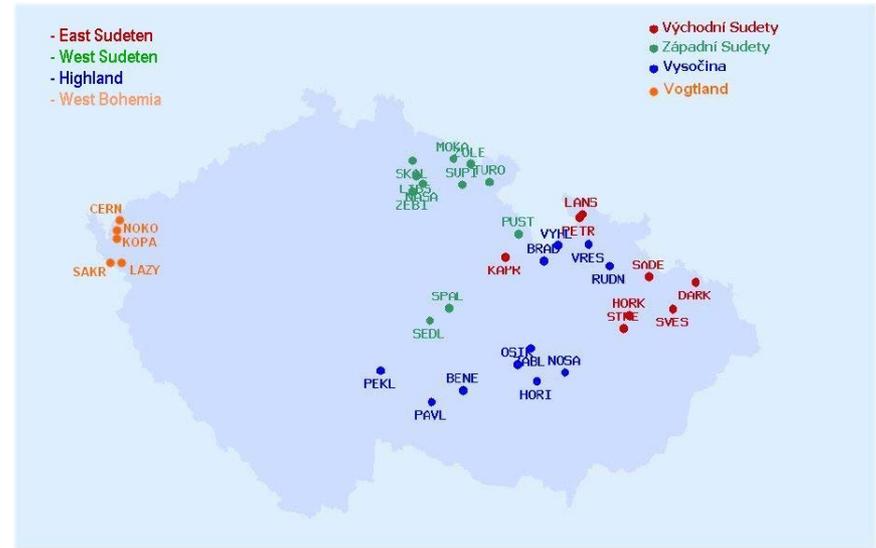

- elevation mask  $5^\circ$  or  $0^\circ$
- registration interval 1 or 5 second
- data transfer to the server of operational center IRS located in the IRSM
- data checking and storage in the database (in the case of missing data the transfer is repeated)
- data archivation
- data transfer from observatories included in the EUREF EPN into the operational centers BKG in Frankfurt and BEV in Wien

# Processing of GNSS data from permanent observatories

- data processing by software Bernese 5.0 edition using BPE
- precise satellite orbits and satellite clock data, precession of the Earth's rotation parameters were used from CODE - Bern
- geocentric and geographic coordinates were computed in ITRF2000 reference frame
- stability of daily solution is done using four stations EPN: Wetzel (WTZR), Graz (GRAZ), Potsdam (POTS) a Borowiec (BOR1)
- time series positions GNSS antennas

# Epoch GNSS networks

- East and West Sudeten networks build in 1997 and 2001 with together 23 stations (observed 1997 - 2009)

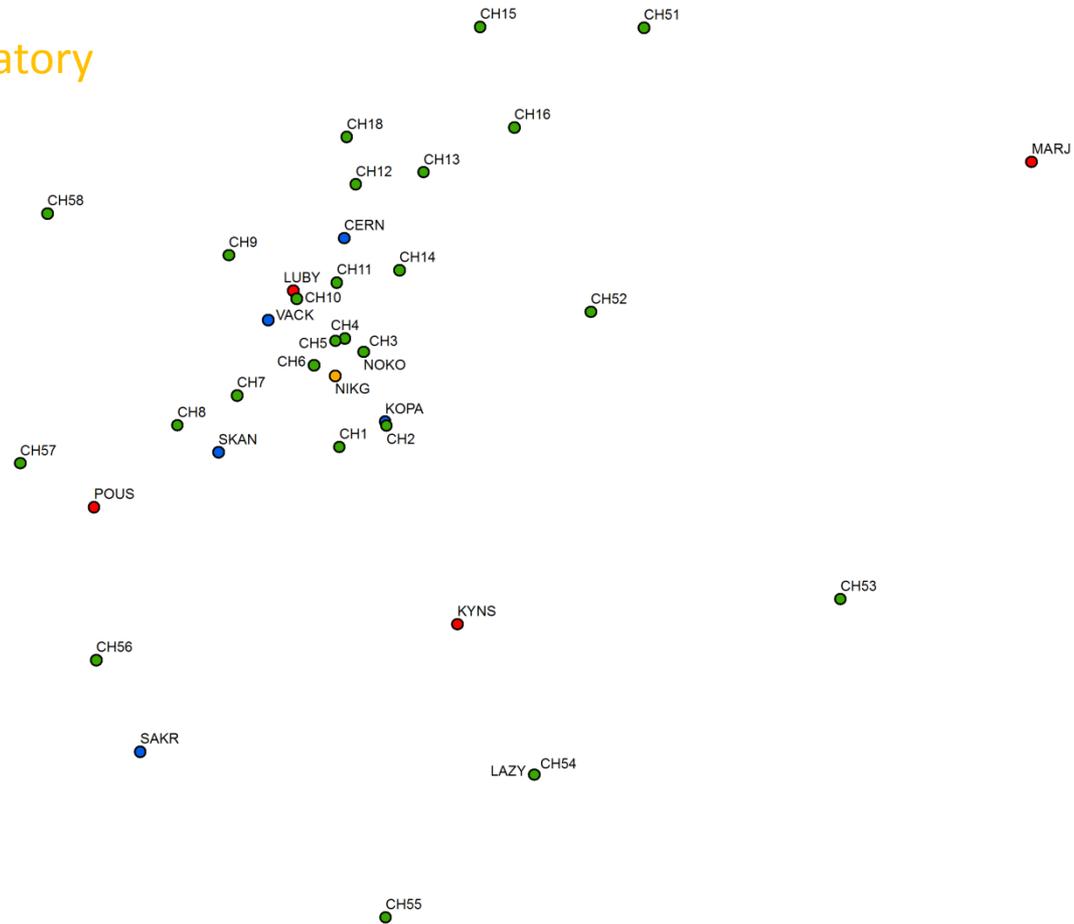

- Highland network with 7 stations established in 2005 (observed 2005 – 2010)
- West Bohemia network took place in 2007 with 5 stations (observed 2007 – 2011)

# Reprocessing the West Bohemia data

- together with colleague from The Institute of Geophysics
- reprocessing historic data from IRSM epoch sites (CERN, NOKO, KOPA, LAZY, SAKR) and permanent observatories in nearby area (LUBY, KYNS, POUS, MARJ) together with data from 25 IG epoch sites Cheb (CH1 – CH16, CH18, CH51-CH58) and IG permanent observatory in Nový Kostel (NKIG)

# The chart of reprocessed sites

- IRSM permanent observatory
- IRSM epoch site
- IG permanent observatory
- IG epoch site

# Reprocessing the West Bohemia data

- starting with the year 2007
- reprocessing the whole year
- data processing by two softwares Bernese 5.0 and Gamit
- stability of daily solution will be done using ten stations IGS: Borowiec (BOR1), Frankfurt (FFMJ), Ondrejov (GOPE), Graz (GRAZ), Huegelheim (HUEG), Penc (PENC), Potsdam (POTS), Braunschweig (PTBB), Wroclaw (WROC), Bad Koetzting (WTZZ)
- comparison of the results

Workshop CzechGeo/EPOS

# The end

Thank you for your attention
